

Jeremy Ford

Evaluations

Everyone assisted in initial brainstorming and idea suggestions to decide the general direction we wanted to take our app design

Daniel Petruso: Created the storyboard mock up to give a a rough draft of what the finalized app will look like.

Elizabeth Jordan: Wrote up the Architecture and Key functionality putting the ideas and goals of the app in words. Came up with a lot of ideas and details to add to the app and the basic architecture.

Leelee Liang: Suggested ideas to make the app more user friendly and researched possible things to implement.

Jeremy Ford: Wrote the application concept down, system component, and work break down. Helped with some architecture and functionality ideas.

Everyone contributed fairly equally.
